PROFESSIONAL SUMMARY

OSINT Analyst and Cybersecurity Researcher with hands-on experience building automated investigation pipelines, conducting digital footprint audits, performing skip tracing, and generating structured intelligence reports. Creator of a fully operational OSINT Master Suite capable of running multi-pipeline investigations with automated case folder generation, raw-output collection, and summary reporting. Known for methodical problem-solving, clean workflow organization, and the ability to turn complex technical challenges into reliable, repeatable processes. Seeking a remote role in OSINT, cybersecurity, threat intelligence, or investigative research.

CORE COMPETENCIES

- OSINT Investigations & Reconnaissance
- Digital Footprint Analysis
- Skip Tracing & Identity Resolution
- Background Checks & Due Diligence
- Threat Surface Mapping
- Public Records Research
- SOCMINT & Online Activity Profiling
- Intelligence Report Writing
- Data Verification & Cross-Referencing
- Automated Investigation Pipelines
- Case Management & Documentation
- Python & Windows Scripting for OSINT

TECHNICAL SKILLS

OSINT Tools: Sherlock, GHunt, PhoneInfoga, SpiderFoot, theHarvester, ExifTool, Maltego CE

Recon & Analysis: Google Dorking, WHOIS, nslookup, metadata extraction, passive recon

Automation & Scripting: Python 3.10/3.12, Windows Batch Scripting

Browsers & Search: Brave, Firefox, Google Advanced Search, Bing Operators

Mapping & GEOINT: Google Maps, Google Earth, Street View, satellite imagery

Documentation: Obsidian, Markdown, Microsoft Office Suite

System Utilities: Windows CMD, PowerShell (basic)

TECHNICAL PROJECTS

OSINT Master Suite – Automated Investigation Program (2025–2026)

Tools: Sherlock, GHunt, PhoneInfoga, SpiderFoot, ExifTool, Python 3.12, Windows Batch

- Built a fully automated OSINT program capable of running username, email, phone, domain, file, and passive recon pipelines from a unified command-line interface.
- Designed a professional case management system with timestamped folders, raw-output storage, logs, notes, and summary generation.
- Integrated multiple reconnaissance tools into a seamless workflow with error handling, environment validation, and structured output.
- Developed a Passive Recon pipeline for threat surface mapping using passive search techniques, cached content analysis, directory exposure checks, and GitHub footprinting.
- Created a clean, cinematic “Matrix-style” interface for ease of use and professional presentation.

Digital Footprint Intelligence System

- Performed multi-platform username correlation, identity verification, and social media mapping.
- Used Maltego, SpiderFoot, and custom scripts to map relationships, timelines, and digital activity patterns.
- Delivered structured intelligence reports with findings, risks, and actionable recommendations.

Skip Tracing & Background Research Toolkit

- Conducted identity resolution using public records, OSINT tools, and advanced search operators.
- Cross-referenced data from multiple sources to verify identities, employment, and online presence.
- Produced due diligence reports for investigative and risk-assessment scenarios.

PROFESSIONAL EXPERIENCE

OSINT Researcher & Skip Tracing Specialist (Independent)

2025 – Present | Jacksonville, FL (Remote)

- Conduct open-source investigations using structured OSINT workflows and automated tooling.
- Perform skip tracing using public records, digital footprints, and identity correlation techniques.
- Build detailed intelligence reports for due diligence, background checks, and risk assessments.
- Analyze social media, public records, corporate filings, and digital footprints.
- Create timelines, relationship maps, and investigative summaries.
- Maintain ethical, verification-driven investigative practices.

Data Collection Specialist / Research Analyst (Freelance)

- Conducted large-scale data collection, verification, and organization for research and investigative projects.
- Performed digital footprint analysis and identity verification using OSINT techniques.
- Delivered structured reports with actionable insights for clients.
- Maintained high accuracy while working independently in remote environments.

OSINT PIPELINE CAPABILITIES (FULL OPERATIONAL PROGRAM)

Username Sweep

- Identifies accounts, aliases, and identity footprints across platforms.
- Detects impersonation risks and alias reuse.

Email Trace

- Analyzes breach exposure, linked accounts, metadata, and domain intelligence.

Phone Intelligence

- Performs non-intrusive analysis of carrier, line type, spam risk, and public footprint.

Domain Recon

- Maps infrastructure, subdomains, DNS records, technologies, and potential vulnerabilities.

File Metadata Extraction

- Extracts hidden metadata including timestamps, device info, GPS, and editing history.

Passive Recon / Threat Surface Mapping

- Uses passive techniques to identify indexed documents, cached pages, exposed directories, and GitHub references.
- Builds a non-intrusive threat surface profile without interacting with systems.

EDUCATION

Self-Directed OSINT & Cybersecurity Training (2024–2025)

- OSINT workflows
- Skip tracing methodologies
- Public records research
- Digital investigations
- Python OSINT tooling
- Reconnaissance techniques

CERTIFICATIONS

- Certified Open Source Intelligence Professional (COSP)
- CompTIA Security+ (In Progress)
- NITA Surveillance & Investigations (Planned)
- ASIS APP (Planned)

PORTFOLIO

Full OSINT Investigation Portfolio (PDF available upon request)

Includes:

- Pipeline summaries
- Case studies
- Raw-output examples
- Risk assessments
- Recommendations
- Full operational program documentation
